Cancer Patient Experience Survey

2022 Results

West Hertfordshire Teaching Hospitals NHS Trust

Published July 2023

The Cancer Patient Experience Survey is undertaken by Picker on behalf of NHS England

Executive Summary

Questions Above Expected Range

	Case Mix Adjusted Scores			National Score
	2022 Score	Lower Expected Range	Upper Expected Range	
Q51. Patient definitely received the right amount of support from their GP practice during treatment	**56%**	34%	55%	**45%**
Q52. Patient has had a review of cancer care by GP practice	**29%**	14%	27%	**21%**

Questions Below Expected Range

	Case Mix Adjusted Scores			National Score
	2022 Score	Lower Expected Range	Upper Expected Range	
Q5. Patient received all the information needed about the diagnostic test in advance	**85%**	88%	97%	**92%**
Q6. Diagnostic test staff appeared to completely have all the information they needed about the patient	**77%**	77%	90%	**83%**
Q12. Patient was told they could have a family member, carer or friend with them when told diagnosis	**61%**	68%	83%	**76%**
Q23. Patient could get further advice or a second opinion before making decisions about their treatment options	**40%**	41%	63%	**52%**
Q36. Hospital staff always did everything they could to help the patient control pain	**76%**	77%	92%	**84%**
Q38. Patient received easily understandable information about what they should or should not do after leaving hospital	**80%**	82%	94%	**88%**
Q41_3. Beforehand patient completely had enough understandable information about radiotherapy	**79%**	80%	97%	**88%**
Q41_4. Beforehand patient completely had enough understandable information about hormone therapy	**57%**	62%	95%	**79%**
Q43. Patient felt the length of waiting time at clinic and day unit for cancer treatment was about right	**67%**	69%	87%	**78%**

Introduction

The National Cancer Patient Experience Survey 2022 is the 12th iteration of the survey first undertaken in 2010. It has been designed to monitor progress on cancer care; to provide information to drive local quality improvements; to assist commissioners and providers of cancer care; and to inform the work of the various charities and stakeholder groups supporting cancer patients.

The survey was overseen by a national Cancer Patient Experience Advisory Group. This Advisory Group set the principles and objectives of the survey programme and guided questionnaire development. The survey was commissioned and managed by NHS England. The survey provider, Picker, is responsible for designing, running and analysing the survey.

The 2022 survey involved 133 NHS Trusts. Out of 115,662 people, 61,268 people responded to the survey, yielding a response rate of 53%.

Methodology

Eligibility, fieldwork and survey methods

The sample for the survey included all adult (aged 16 and over) NHS patients, with a confirmed primary diagnosis of cancer, discharged from an NHS Trust after an inpatient episode or day case attendance for cancer related treatment in the months of April, May and June 2022. The fieldwork for the survey was undertaken between November 2022 and February 2023.

As in the previous seven years, the survey used a mixed mode methodology. Questionnaires were sent by post, with two reminders where necessary, but also included an option to complete the questionnaire online. A Freephone helpline and email was available for respondents to opt out, ask questions about the survey, enable them to complete their questionnaire over the phone and provide access to a translation and interpreting facility for those whose first language was not English.

Case-mix adjustment

Both unadjusted and adjusted scores are presented in this report. Case-mix adjusted scores allow us to account for the impact that differing patient populations might have on results. By using the case-mix adjusted estimates we can obtain a greater understanding of how a Trust is performing given their patient population. The factors taken into account in this case-mix adjustment are Male/Female/Non-binary/Other, age, ethnicity, deprivation, and cancer type.

Unadjusted data should be used to see the actual responses from patients relating to the Trust. Case-mix adjusted data, together with expected ranges, should be used to understand whether the results are significantly higher or lower than national results taking account of the patient mix.

Scoring methodology

Sixty-one questions from the questionnaire are scored as these questions relate directly to patient experience. For all but one question (Q59), the score shows the percentage of respondents who gave the most favourable response to a question. For Q59, respondents rate their overall care on a scale of 0 to 10, of which the average was calculated for this question’s score. The percentages in this report have been rounded to the nearest percentage point. Therefore, in some cases the figures do not appear to add up to 100%.

Please note that following a review of the scoring methodology, a change was made to the scoring of Q12 such that the response option “No, I was told by letter or email” is no longer considered neutral.

Statistical significance

In the reporting of 2022 results, appropriate statistical tests have been undertaken to identify unadjusted scores for which the change over time is ‘statistically significant’. A statistically significant difference means that the change in the result is very unlikely to have occurred by chance.

Suppression

Data is suppressed for two reasons: to ensure unreliable results based on very small numbers of respondents are not released, and to prevent individuals being identifiable in the data.

In cases where a result is based on fewer than 10 responses, the result has been suppressed. For example, where fewer than 10 people answered a question from a particular Trust, the results are not shown for that question for that Trust.

For Trusts with an eligible population of 1,000 or fewer, data relating to the respondent and their condition has been suppressed where 5 people or fewer were in a particular category. In instances where only one has been suppressed, the next lowest category has been suppressed to prevent back calculation from the total number of responses.

Additional suppression

Additional suppression happens if only **one** Trust has a score suppressed. If this happens, we will suppress another Trust's results (both the Trust level and subgroup results for the question) based on the next lowest number of respondents for the score. We do this so that the national score cannot be used to work out the score for the individual Trust.

The same rule applies to groups in each subgroup breakdown. For example, if only **one** Trust has the 85+ age group suppressed for Q25 we will need to suppress another Trust's results for the 85+ age group on Q25. This suppression is based on the 85+ age group with the next lowest number of respondents for Q25.

Understanding the results

This report shows how this Trust scored for each question in the survey compared with national results. It is aimed at helping individual Trusts to understand their performance and identify areas for local improvement. Below is a description of the type of results presented within this report and how to understand them.

Expected range charts

The expected range charts in this report show a bar with the lowest and highest score received for each question nationally. Within this bar, an expected range is given (within the grey bar) and a black diamond represents the actual score for this Trust.

Trusts whose score is above the upper limit of the expected range (in the dark blue) are positive outliers, with a score statistically significantly higher than the national mean. This indicates that the Trust performs better than what Trusts of the same size and demographics are expected to perform. The opposite is true if the score is below the lower limit of the expected range (in the light blue); these are negative outliers. For scores within the expected range (in the grey), the score is what we would expect given the Trust's size and demographics.

Comparability tables

The comparability tables show the 2021 and 2022 unadjusted scores for this Trust for each scored question. If there is a statistically significant change from 2021 an arrow will be presented for the direction of change.

The adjusted 2022 score will also be presented for each scored question along with the lower and upper expected range and national score. Scores above the upper limit of the expected range will be highlighted dark blue, scores below the lower limit of the expected range will be highlighted light blue, and scores within the lower and upper limit of the expected ranges will be highlighted grey.

Sub-group breakdowns

Unadjusted scores are shown for tumour type, Male/Female/Non-binary/Other, age, IMD quintile, long-term condition status and ethnicity breakdowns. Unadjusted scores for the same sub-group across different Trusts may not be comparable, as they do not account for the impact that differing patient populations might have on results.

Tumour type tables

The tumour type tables show the unadjusted scores for each scored question for each of the 13 tumour groups. Central nervous system is abbreviated as 'CNS' and lower gastrointestinal tract is abbreviated as 'LGT' throughout this report.

Age group tables

The age group tables show the unadjusted scores for each scored question for each of the eight age groups.

Male/Female/Non-binary/Other tables

These tables show the unadjusted scores for the following groups male; female; non-binary; prefer to self-describe; and prefer not to say.

Ethnicity tables

The ethnicity tables show the unadjusted scores for six ethnicity groups.

Long-term condition status tables

The long-term condition status tables show the unadjusted scores for two groups: those who indicate they have one or more long term conditions and those who indicate that they have no long-term conditions.

IMD quintile tables

The IMD quintile tables show the unadjusted scores for five quintiles based on relative disadvantage, with quintile 1 being the most deprived and quintile 5 being the least deprived.

Year on year charts

The year on year charts show two columns representing the unadjusted scores of the last two years (2021 and 2022) for each scored question.

Further information

This research was carried out in accordance with the international standard for organisations conducting social research (accreditation to ISO20252:2012; certificate number GB08/74322). The 2022 survey data has been produced and published in line with the Code of Practice for Official Statistics.

For more information on the methodology, please see the Technical Document. It can be viewed along with the 2022 questionnaire and survey guidance on the website at www.ncpes.co.uk. For all other outputs at Trust level, please see the Excel tables and dashboards at www.ncpes.co.uk.

Response Rate

Overall Response Rate

168 patients responded out of a total of 332 patients, resulting in a response rate of 51%.
