Executive summary

Questions above expected range

Kent and Medway Cancer Alliance has no scores above expected range.

Questions below expected range

	Case mix adjusted scores			England score
	2023 score	Lower expected range	Upper expected range	
Q3. Referral for diagnosis was explained in a way the patient could completely understand	**60%**	63%	70%	**67%**
Q12. Patient was told they could have a family member, carer or friend with them when told diagnosis	**77%**	78%	84%	**81%**
Q13. Patient was definitely told sensitively that they had cancer	**72%**	72%	77%	**74%**
Q14. Cancer diagnosis explained in a way the patient could completely understand	**75%**	75%	78%	**77%**
Q15. Patient was definitely told about their diagnosis in an appropriate place	**83%**	84%	87%	**86%**
Q16. Patient was told they could go back later for more information about their diagnosis	**81%**	81%	87%	**84%**
Q19. Patient found advice from main contact person was very or quite helpful	**94%**	94%	97%	**96%**
Q22. Family and/or carers were definitely involved as much as the patient wanted them to be in decisions about treatment options	**81%**	81%	86%	**83%**
Q27. Staff provided the patient with relevant information on available support	**88%**	89%	93%	**91%**
Q31. Patient had confidence and trust in all of the team looking after them during their stay in hospital	**74%**	75%	80%	**77%**
Q34. Patient was always able to get help from ward staff when needed	**69%**	69%	76%	**73%**
Q35. Patient was always able to discuss worries and fears with hospital staff	**60%**	61%	68%	**65%**
Q36. Hospital staff always did everything they could to help the patient control pain	**81%**	82%	86%	**84%**
Q37. Patient was always treated with respect and dignity while in hospital	**83%**	85%	90%	**87%**
Q38. Patient received easily understandable information about what they should or should not do after leaving hospital	**86%**	86%	90%	**88%**
Q39. Patient was always able to discuss worries and fears with hospital staff while being treated as an outpatient or day case	**75%**	75%	83%	**79%**
Q41_2. Beforehand patient completely had enough understandable information about chemotherapy	**83%**	84%	88%	**86%**
Q46. Patient was given information that they could access about support in dealing with immediate side effects from treatment	**83%**	84%	90%	**87%**
Q51. Patient definitely received the right amount of support from their GP practice during treatment	**42%**	42%	51%	**46%**
Q53. After treatment, the patient definitely could get enough emotional support at home from community or voluntary services	**26%**	27%	38%	**32%**
Q56. The whole care team worked well together	**88%**	88%	92%	**90%**
Q57. Administration of care was very good or good	**84%**	85%	89%	**87%**

Introduction

The National Cancer Patient Experience Survey 2023 is the thirteenth iteration of the survey first undertaken in 2010. It has been designed to monitor progress on cancer care; to provide information to drive local quality improvements; to assist commissioners and providers of cancer care; and to inform the work of the various charities and stakeholder groups supporting cancer patients.

The survey was undertaken by Picker on behalf of NHS England and it was overseen by a national Cancer Patient Experience Advisory Group. This Advisory Group set the principles and objectives of the survey programme and guided questionnaire development. The survey was commissioned and managed by NHS England. The survey provider, Picker, is responsible for designing, running and analysing the survey.

The 2023 survey involved 132 NHS trusts. Out of 121,121 people, 63,428 people responded to the survey, yielding a response rate of 52%.

This document was reissued in November 2024 to include an Integrated Care Board expected range summary section.

Methodology

Eligibility, fieldwork and survey methods
The sample for the survey included all adult (aged 16 and over) NHS patients, with a confirmed primary diagnosis of cancer, discharged from an NHS trust after an inpatient episode or day case attendance for cancer related treatment in the months of April, May and June 2023. The fieldwork for the survey was undertaken between November 2023 and February 2024.

As in the previous eight years, the survey used a mixed mode methodology. Questionnaires were sent by post, with two reminders where necessary, but also included an option to complete the questionnaire online. A Freephone helpline and email was available for respondents to opt out, ask questions about the survey, enable them to complete their questionnaire over the phone and provide access to a translation and interpreting facility for those whose first language was not English.

Note on question comparability
The questionnaire was redeveloped for the 2021 National Cancer Patient Experience Survey. Year on year comparisons between 2021, 2022 and 2023 are included in this report for most questions. A review of the questionnaire in 2023 saw four changes being made:

- The question text for Q23 and Q42 were amended. These questions are no longer deemed comparable to 2021 and 2022.
- The long-term condition question (Q67) was amended to include "Autism or autism spectrum condition" as a response option. And the "Neurological condition" answer option was updated to include an example condition changing it to "Neurological condition, such as epilepsy". These changes see the answer option "Neurological condition, such as epilepsy" as no longer being deemed comparable to 2021 and 2022.
- The ethnic group question (Q71) was amended to include "Roma" as an answer option. The ethnic group question is still deemed comparable to 2021 and 2022.

How alliance and ICB results are generated
Alliance and ICB results are derived using the post code of each patient, rather than by mapping trust results to ICBs or alliances. This mapping is achieved using lookup files released by the Office for National Statistics.

Alliance and ICB results therefore reflect the experience of people referred from within the geographical footprint.

Case-mix adjustment
Both unadjusted and adjusted scores are presented in this report. Case-mix adjusted scores allow us to account for the impact that differing patient populations might have on results. By using the case-mix adjusted estimates we can obtain a greater understanding of how an alliance is performing given their

patient population. The factors taken into account in this case-mix adjustment are Male/Female/Non-binary/Other, age, ethnicity, deprivation, and cancer type.

Unadjusted data should be used to see the actual responses from patients relating to the alliance. Case-mix adjusted data, together with expected ranges, should be used to understand whether the results are significantly higher or lower than national results taking account of the patient mix.

Scoring methodology

Sixty-one questions from the questionnaire are scored as these questions relate directly to patient experience. For all but one question (Q59), the score shows the percentage of respondents who gave the most favourable response to a question. For Q59, respondents rate their overall care on a scale of 0 to 10, of which the average was calculated for this question's score. The percentages in this report have been rounded to the nearest percentage point. Therefore, in some cases the figures do not appear to add up to 100%.

In 2022, following a review of the scoring methodology, a change was made to the scoring of Q12 such that the response option "No, I was told by letter or email" is no longer considered neutral and is now scored as negative.

Statistical significance

In the reporting of 2023 results, appropriate statistical tests have been undertaken to identify unadjusted scores for which the change over time is 'statistically significant'. A statistically significant difference means that the change in the result is very unlikely to have occurred by chance.

Suppression

Data is suppressed for two reasons: to ensure unreliable results based on very small numbers of respondents are not released, and to prevent individuals being identifiable in the data.

In cases where a result is based on fewer than 10 responses, the result has been suppressed. For example, where fewer than 10 people answered a question from a particular alliance, the results are not shown for that question for that alliance.

For alliances with an eligible population of 1,000 or fewer, data relating to the respondent and their condition has been suppressed where 5 people or fewer were in a particular category. In instances where only one has been suppressed, the next lowest category has been suppressed to prevent back calculation from the total number of responses.

Additional suppression

Additional suppression happens if only **one** alliance has a score suppressed. If this happens, we will suppress another alliance's results (both the alliance level and sub-group results for the question) based on the next lowest number of respondents for the score. We do this so that the national score cannot be used to work out the score for the individual alliance.

The same rule applies to groups in each sub-group breakdown. For example, if only one alliance has the 85+ age group suppressed for Q25 we will need to suppress another alliance's results for the 85+ age group on Q25. This suppression is based on the 85+ age group with the next lowest number of respondents for Q25.

Understanding the results

This report shows how this alliance scored for each question in the survey compared with England results. It is aimed at helping individual alliances to understand their performance and identify areas for local improvement. Below is a description of the type of results presented within this report and how to understand them.

Expected range charts

The expected range charts in this report show a bar with the lowest and highest score received for each question nationally. Within this bar, an expected range is given (within the grey bar) and a black diamond represents the actual score for this alliance.

Alliances whose score is above the upper limit of the expected range (in the dark blue) are positive outliers, with a score statistically significantly higher than the national mean. This indicates that the alliance performs better than what alliances of the same size and demographics are expected to perform. The opposite is true if the score is below the lower limit of the expected range (in the light

blue); these are negative outliers. For scores within the expected range (in the grey), the score is what we would expect given the alliance's size and demographics.

Comparability tables

The comparability tables show the 2022 and 2023 unadjusted scores for this alliance for each scored question. The Change 2022-2023 and Change overall columns show whether the scores show a statistically significant variation between years. This is shown between 2022-2023 and as an overall between 2021-2023. An upwards arrow indicates a statistically significant increase, a downwards arrow indicates a statistically significant decrease and no arrow indicates no statistically significant change.

The adjusted 2023 score will also be presented for each scored question along with the lower and upper expected range and national score. Scores above the upper limit of the expected range will be highlighted dark blue, scores below the lower limit of the expected range will be highlighted light blue, and scores within the lower and upper limit of the expected ranges will be highlighted grey.

Sub-group breakdowns

Unadjusted scores are shown for tumour group, Male/Female/Non-binary/Other, age, IMD quintile, long-term condition status and ethnicity breakdowns. Unadjusted scores for the same sub-group across different alliances may not be comparable, as they do not account for the impact that differing patient populations might have on results.

Tumour group tables

The tumour group tables show the unadjusted scores for each scored question for each of the 13 tumour groups. Central nervous system is abbreviated as 'CNS' and lower gastrointestinal tract is abbreviated as 'LGT' throughout this report.

Age group tables

The age group tables show the unadjusted scores for each scored question for each of the eight age groups.

Male/Female/Non-binary/Other tables

These tables show the unadjusted scores for the following groups male; female; non-binary; prefer to self-describe; and prefer not to say.

Ethnicity tables

The ethnicity tables show the unadjusted scores for six ethnicity groups.

Long-term condition status tables

The long-term condition status tables show the unadjusted scores for two groups: those who indicate they have one or more long-term conditions and those who indicate that they have no long-term conditions.

IMD quintile tables

The IMD quintile tables show the unadjusted scores for five quintiles based on relative disadvantage, with quintile 1 being the most deprived and quintile 5 being the least deprived.

Year on year charts

The year on year charts show three columns representing the unadjusted scores of the last three years (2021, 2022 and 2023) for each scored question.

Trust expected range summary

The number of scored questions that fell below, within and above the expected range for each trust within the alliance.

ICB expected range summary

The number of scored questions that fell below, within and above the expected range for each ICB within the alliance.

National level and England level data

In some cases (343 respondents in 2023), patients from outside England (from Wales, Scotland, Northern Ireland, the Channel Islands or the Isle of Man) are referred to English NHS trusts for treatment. These patients are described as 'Non-England' in other reports.

Overall response rate at response rate sections shows national level counts and response rate. For cancer alliances and its comparison at comparability tables section, all data is presented at the England level.

Further information

This research was carried out in accordance with the international standard for organisations conducting market and social research (accreditation to ISO20252:2019; certificate number GB08/74322). Our statistical practice is regulated by the Office for Statistics Regulation (OSR). OSR sets the standards of trustworthiness, quality, and value in the Code of Practice for Statistics that all producers of official statistics should adhere to. You are welcome to contact us directly with any comments about how we meet these standards. Alternatively, you can contact OSR by emailing regulation@statistics.gov.uk or via the OSR website.

For more information on the methodology, please see the Technical Document. It can be viewed along with the 2023 questionnaire and survey guidance on the website at www.ncpes.co.uk. For all other outputs at alliance level, please see the Excel tables and dashboards at www.ncpes.co.uk.

Response rate

Overall response rate

2,472 patients responded out of a total of 4,786 patients, resulting in a response rate of 52%.

SUPPORT FROM YOUR GP PRACTICE

Q2. Patient only spoke to primary care professional once or twice before cancer diagnosis — 79%

Q3. Referral for diagnosis was explained in a way the patient could completely understand — 60%

DIAGNOSTIC TESTS

Q5. Patient received all the information needed about the diagnostic test in advance — 91%

Q6. Diagnostic test staff appeared to completely have all the information they needed about the patient — 82%

Q7. Patient felt the length of time waiting for diagnostic test results was about right — 76%

Q8. Diagnostic test results were explained in a way the patient could completely understand — 77%

Q9. Enough privacy was always given to the patient when receiving diagnostic test results — 94%

FINDING OUT THAT YOU HAD CANCER

Q12. Patient was told they could have a family member, carer or friend with them when told diagnosis — 77%

Q13. Patient was definitely told sensitively that they had cancer — 72%

Q14. Cancer diagnosis explained in a way the patient could completely understand — 75%

Q15. Patient was definitely told about their diagnosis in an appropriate place — 83%

Q16. Patient was told they could go back later for more information about their diagnosis — 81%

SUPPORT FROM A MAIN CONTACT PERSON

Q17. Patient had a main point of contact within the care team — 90%

Q18. Patient found it very or quite easy to contact their main contact person — 81%

Q19. Patient found advice from main contact person was very or quite helpful — 94%
